Core Values of Librarianship

The foundation of modern librarianship rests on an essential set of core values that define, inform, and guide our professional practice. These values reflect the history and ongoing development of the profession and have been advanced, expanded, and refined by numerous policy statements of the American Library Association. Among these are: Access Confidentiality/ Privacy Democracy Diversity Education and Lifelong Learning Intellectual Freedom Preservation The Public Good Professionalism Service Social Responsibility

<https://www.ala.org/advocacy/advocacy/intfreedom/corevalues>

Access

Confidentiality/Privacy

Democracy

Diversity Equity

“...treating the world as software promotes fantasies of control. And the best kind of control is control without responsibility. Our unique position as authors of software used by millions gives us power, but we don't accept that this should make us accountable. We're programmers—who else is going to write the software that runs the world? To put it plainly, we are surprised that people seem to get mad at us for trying to help.

“Fortunately we are smart people and have found a way out of this predicament. Instead of relying on algorithms, which we can be accused of manipulating for our benefit, we have turned to machine learning, an ingenious way of disclaiming responsibility for anything. Machine learning is like money laundering for bias. It's a clean, mathematical apparatus that gives the status quo the aura of logical inevitability. The numbers don't lie.”

- Maciej Cegłowski

Intellectual Freedom

The Public Good

A Friedman doctrine— The Social Responsibility Of Business Is to Increase Its Profits

By HILTON FRIEDMAN

TAMING G.M.—Chairman James Roche of General Motors (right) replies to members of Campaign G.M. (below, wearing "Tame G.M." buttons) at the corporation's stockholders' meeting in May. Representatives of the campaign demanded that G.M. name three new directors to represent "the public interest" and set up a committee to study the company's performance in such areas of public concern as safety and pollution. The stockholders defeated the proposals overwhelmingly, but management, apparently in response to the second demand, recently named five directors to a "public-policy committee." The author asks such drives for social responsibility in business "pure and unadulterated socialism," adding: "Businessmen who talk this way are unwitting puppets of the intellectual forces that have been undermining the basis of a free society."

Joyce Keethines, New York Environmental Protection Administrator.

Betty Furzen, former-affairs adviser to the Johnson Administration.

Philip Swannan, chairman of Campaign G.M.'s parent organization.

John Epstein, lawyer and coordinator of Campaign G.M.

WHEN I hear businessmen speak eloquently about the "social responsibilities" of business in a free-enterprise system, I am reminded of the wonderful line about the Frenchman who discovered at the age of 70 that he had been speaking prose all his life. The businessman believes that they are defending free enterprise when they declare that business is not concerned "merely" with profit but also with providing desirable "social consciousness" and takes seriously its responsibilities for providing employment, eliminating discrimination, avoiding pollution and whatever else may be the catchwords of the contemporary crop of reformers. In fact they are—or would be if they or anyone else took them seriously—preaching pure and unadulterated socialism. Businessmen who talk this way are unwitting puppets of the intellectual forces that have been undermining the basis of a free society these past decades.

The discussions of the "social responsibilities of business" are notable for their analytical looseness and lack of rigor. What does it mean to say that "business" has responsibilities? Only people can have responsibilities. A corporation is an artificial person and in this sense may have artificial responsibilities, but "business" as a social category cannot have responsibilities, even in the loosest sense. *The New York Times*

HILTON FRIEDMAN is a professor of economics at the University of Chicago.

ward clarity in examining the doctrine of the social responsibility of business is to ask precisely what it implies for whom.

Presumably, the individuals who are to be responsible are businessmen, which means individual proprietors or corporate executives. Most of the discussion of social responsibility is directed at corporations, so in what follows, I shall mostly neglect the individual proprietor and speak of corporate executives.

IN a free-enterprise, private-property system, a corporate executive is an employee of the owners of the business. He has direct responsibility to his employers. That responsibility is to conduct the business in accordance with their desires, which generally will be to make as much money as possible while conforming to the basic rules of the society, both those embodied in law and those embodied in ethical custom. Of course, in some cases his employers may have a different objective. A group of persons might establish a corporation for an eleemosynary purpose—for example, a hospital or a school. The manager of such a corporation will not have money profit as his objective but the rendering of certain services.

In either case, the key point is that, in his capacity as a corporate executive, the manager is the agent of his employers. He must not be a corporation or establish the eleemosynary institution, and his primary responsibility is to them.

Needless to say, this does not mean that it is easy to judge how well he is performing his task. But at least the criterion of performance is straightforward, and the persons among whom a voluntary contractual arrangement exists are clearly defined.

Of course, the corporate executive is also a person in his own right. As a person, he may have many other responsibilities that he recognizes or assumes voluntarily—to his family, his conscience, his religious community, his church, his club, his city, his country. He may feel inclined by these responsibilities to devote part of his income to causes he regards as worthy, to refuse to work for particular corporations, even to leave his job, for example, to join his country's armed forces. If we wish, we may refer to some of these responsibilities as "social responsibilities." But in these respects he is acting as a principal, not as agent; he is spending his own money or time or energy, not the money of his employers or the time or energy he has contracted to devote to their purposes. If these are "social responsibilities," they are the social responsibilities of individuals, not of business.

What does it mean to say that the corporate executive has a "social responsibility" in his capacity as businessman? If this statement is not pure rhetoric, it must mean that he has responsibilities to some other person or persons other than his employer or employers. For example, that he is to refrain from increasing the price of the product in

order to contribute to the social objective of preventing inflation, even though a price increase would be in the best interests of the corporation. Or that he is to make expenditures on reducing pollution beyond the amount that is in the best interests of the corporation or that is required by law in order to contribute to the social objective of improving the environment. Or that, at the expense of corporate profits, he is to hire "hard-core" unemployed instead of better-qualified available workmen so as to contribute to the social objective of reducing poverty.

In each of these cases, the corporate executive would be spending someone else's money for a general social interest. Insofar as his actions in accord with his "social responsibility" reduce returns to stockholders, he is spending their money. Insofar as his actions raise the price to customers, he is spending the customers' money. Insofar as his actions lower the wages of some employees, he is spending their money.

The stockholders or the customers or the employees could separately spend their own money on the particular action if they wished to do so. The executive is exercising a distinct "social responsibility," rather than serving as an agent of the stockholders or the customers or the employees, only if he spends the money in a different way than they would have spent it.

But it is not clear, as we saw in our preceding pages, on the one hand, (Continued on Page 122)

Joseph Chak, lawyer and a founder of Campaign G.M.

Barbara Williams, a law student at U.C.L.A.

Robert Townsend, the author of "Up the Organization."

The Rev. Clarence Phillips, a civil-rights activist.

The New York Times

Why Some Societies: Ritual Human Sacrific

Apr 4, 2016 — They we the presence or absen

Positive effects

- **Social unity:** Human sacrifice can create a bond that unifies a community.
- **Social hierarchies:** Human sacrifice can help create and maintain social hierarchies, which can lead to less social mobility and more fixed strata.
- **Complex civilizations:** Some research suggests that human sacrifice may have helped encourage the development of complex civilizations in Southeast Asia and the South Pacific.

Negative effects

- **Blood frenzy:** Human sacrifice can lead to mass killings and blood frenzies that destabilize society.
- **Less egalitarian societies:** Human sacrifice can make societies less egalitarian and give rise to strict class systems.
- **Political purposes:** Human sacrifice can be used for political purposes, such as intimidation.

Human sacrifice has been used for many purposes, including:

- To appease gods
- To mark important events, such as the death of a leader or the construction of a house or boat
- To punish taboo violations
- To demoralize the underclass
- To instill fear of social elites
- To maintain or cement power
- To proclaim divinity

Fire ants, including the Imported Red Fire Ant, are occasionally found in Maryland. They are a common pest in Baltimore and other parts of the southeastern United States. ^

Fire Ant (red imported) (*Solenopsis invica*)

(isolated colonies recorded, none established)

Imported from South America in the 1930s, the Imported Red Fire Ant is classified as an Invasive Species of Concern in Maryland. While this species has been found in Maryland, no established colonies have been recorded in the State.

- [Federally Quarantined Areas by County](#)

If a Fire Ant is found, contact the [Maryland Department of Agriculture](#) immediately. Bites from a Fire Ant may require emergency care.

PRINCIPLE 4

Libraries believe “no human, no AI.”

Join my newsletter & get the comics in your inbox. **Work Chronicles**
Sign up at my website (workchronicles.com) workchronicles.com

PRINCIPLE 5

Libraries prioritize the security and privacy of users in the use of AI tools, technology, and training data.

PRINCIPLE 6

Libraries assert that copyright law in the US and Canada is flexible and robust enough to respond to many copyright issues that arise from the intersection of technology and artificial intelligence.

From “Library Copyright Alliance Principles for Copyright and Artificial Intelligence”

“AI has the potential to disrupt many professions, not just individual creators. The response to this disruption (e.g., support for worker retraining through institutions such as community colleges and public libraries) should be developed on an economy-wide basis, and copyright law should not be treated as a means for addressing these broader societal challenges.”

<https://www.librarycopyrightalliance.org/wp-content/uploads/2023/06/AI-principles.pdf>

We Asked A.I. to Create the Joker. It Generated a Copyrighted Image.

The tools can make an image based on simple text prompts, which raises concerns that they could exploit artists and violate copyright in the process.

The New York Times

PRINCIPLE 7

Libraries negotiate to preserve the scholarly use of digital information.

KNOWLEDGE AND KNOWHOW**

CHATGPT

“The real problem of humanity is the following: We have Paleolithic emotions, medieval institutions and godlike technology. And it is terrifically dangerous, and it is now approaching a point of crisis overall.”

— Edward O. Wilson

Hi! I'm here to talk with you about the MD Tech Connect Conference. Start the conversation by telling me what your favorite session is or what session you would like to talk to me about.

Sam: The one with Thomas and Sam

Chatbot: It seems like the session with Thomas and Sam touched on various themes, including the role of artificial intelligence in education and human interaction. They discussed the potential benefits of AI in facilitating communication and even therapy, highlighting how some individuals may feel more comfortable interacting with AI in certain contexts. There was also mention of personal experiences related to education and the challenges of transcription, which could reflect on the broader implications of technology in learning environments. The conversation seemed to weave in philosophical reflections, possibly indicating a deeper exploration of how technology intersects with human experiences. What aspects of their discussion stood out to you, or is there a specific topic you would like to delve deeper into?

Their feelings about AI in general

Chatbot Avatar In the session with Thomas and Sam, there were mixed feelings about AI. They acknowledged the potential of AI to assist in various tasks, such as modeling and design, but also expressed caution regarding its implications. There was a concern about the perception of AI as having human-like qualities, which can lead to misunderstandings about its capabilities and limitations. They highlighted the importance of critical thinking when engaging with AI, emphasizing that while it can be a useful tool, it should not replace human intelligence or creativity. The discussion also touched on the societal impacts of AI, including fears about job displacement and wealth inequality, suggesting that while AI could bring about significant changes, it also raises important ethical and practical questions. What do you think are the most pressing ethical considerations regarding AI that we should be aware of as we move forward? How does it intersect with our library values?

Chatbot Avatar The intersection of AI with library values is a significant theme discussed in the session. Libraries traditionally prioritize access to information, equity, and community service, and these values can be challenged by the implementation of AI technologies. For instance, the ethical considerations surrounding AI, such as data privacy, bias, and the digital divide, directly relate to the library's mission to provide equitable access to information for all community members. There is a concern that AI could exacerbate existing inequalities if not implemented thoughtfully, as it may benefit those who are already tech-savvy while alienating others. Additionally, the role of libraries as trusted community resources means they have a responsibility to educate patrons about AI, including its benefits and potential harms. This aligns with the library's commitment to fostering informed communities and promoting critical thinking. How do you think libraries can best navigate the challenges posed by AI while staying true to their core values? I want to know whether we should use generative AI in libraries, according to Thomas and Sam.

Chatbot Avatar According to the discussion by Thomas and Sam, there is a nuanced perspective on the use of generative AI in libraries. They recognize that while generative AI has potential applications, such as assisting with tasks like creating book club questions or lesson plans, there are significant ethical considerations and potential harms that need to be addressed. They suggest that libraries should engage with AI technology but do so with caution. The emphasis is on teaching patrons about AI responsibly, ensuring that users understand its limitations and the importance of critical thinking when using these tools. They argue that libraries should not fully embrace generative AI without considering its implications on equity and the potential for unequal benefits in society. Ultimately, the stance seems to be that while generative AI can be a useful tool, libraries should approach its use thoughtfully and ensure that it aligns with their mission to serve the community equitably. What are your thoughts on how libraries can balance the benefits of generative AI with the need for ethical considerations?
